## General Description

The 747FCD Antenna Series intended for fixed station applications is based on the single mast, transportable 747CD Log Periodic Antenna Series. However, materials and construction techniques appropriate to a permanent installation are adopted. The result is an economic antenna permitting simple assembly and erection procedures with a single 75 ft (23 m) mast, saving on foundation work.

The variable take-off angle array configuration results in a high performance antenna well suited to applications where communication over varying distances is required. Elevation angles are appropriate to the frequencies commonly used for short, medium and long distances.

Frequency ranges of 2.0-30 MHz or the more compact 4.0-30 MHz version allow a choice depending upon available site space or distance of communication.

Power ratings of up to 20 kW average, 40 kW peak are available. A single balun transformer converts the 200 ohm antenna feedline to a 50 ohm coaxial input.

## Strength and Durability

The 747FCD Series Antennas are built to withstand harsh environments. The triangular, 17 in face width, guyed tower is of lattice construction with tubular crossmembers. The corner rails are of high yield steel and all parts are hot dip galvanized for corrosion resistance. The "knock-down" tower is easily bolted together on site. Guys of extra high strength galvanized steel wire rope are attached to the steel hairpin anchors supplied for installation in concrete.

The feedline and radiating curtain are accurately prefabricated from

"Alumoweld" wire, a material extremely resistant to corrosion, ensuring high electrical conductivity. The high purity Alumina Ceramic feedline spacers and insulators are unaffected by arcing or corona, unlike organic materials which tend to carbonize under these conditions.

Array support catenaries are fabricated from "Parafil", a stable pre-stretched parallel filament dielectric material, surrounded by a flexible dense black protective sheath which resists ultraviolet light deterioration and moisture penetration.
